

Entalpía

$$H = E + PV; \quad \Delta H = \Delta E + P\Delta V$$

$$\Delta H = Q \text{ para } \Delta P = 0 \text{ (presión constante)}$$

Trabajo

$$W = \int PdV$$

Gas ideal, reversible isotérmico

$$W = nRT \ln \frac{V_2}{V_1}$$

Gas ideal isobárico

$$W = P\Delta V$$

Temperatura variable:

$$\Delta H = \int C_v dT$$

Para C_p constante

$$\Delta H = C_p \Delta T$$
